Unintentional dural Anaesthesia and Pregnancy followed by postdural puncture headache is a well-known complication following neuraxial labor analgesia. Patients with more intense Analgesia acute postoperative pain on movement, preoperative depression, and longer surgical time had greater risk for CPSP following surgery. Methods: Collection and analysis of anonymous data relating to pregnancy management and outcome, using the UKOSS notification and data collection .

It provides useful information for the anesthesiologist in training as well. The chapters are well written and the information is concisely presented.
