Each alternate universe carries its own different version of reality. Parallel Universes you look farther and farther away, you also look farther and farther into the past. Compared to this, the case where the electron is spinning in the other direction is very straightforward. Based on the portion of the Parallel Universes we see, we can state that if the Universe is finite and does curve back on itself, it must have at least millions of times the volume of the portion we can see, with no upper limit to that figure.
