The main exception to this slowdown in demand growth is fresh dairy, as income and population growth in India are expected to lead to a strong increase in consumption. Agriculture consumes around 70 percent of available water, and that figure rises to more than 80 percent in the developing world. For example, five countries account for more than two-thirds of the global wheat and beef exports.

Gerber, Matt Johnston, Deepak K. Resource depletion and climate change pose major challenges to the global food system, but there are opportunities for policy to help address these challenges. Experts observe large variation in yields around the world, even in areas with similar growing conditions. Reduce and eventually eliminate government support directly linked to output, weeds, viruses and disease move to new areas and affect crops, livestock and aquaculture production. Fan also stressed similar policies to the ones suggested by Godfrey: promoting agricultural growth although this won't fix everything and a new development agenda that addresses price volatility, biofuel subsidies and mandates, and provides global physical grain reserves for times of emergencies.
